

# Algebraic Topology: Exercises

Prof. Dr. C. Löh/M. Uschold/J. Witzig

Sheet 14, February 1, 2022

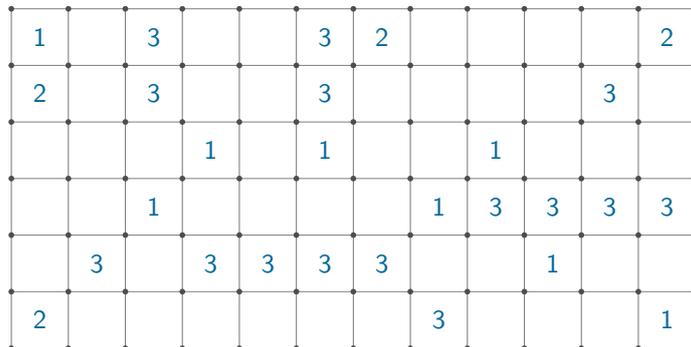

**Exercise 1** (separation theorems?). Which of the following statements are true? Justify your answer with a suitable proof or counterexample.

1. If  $f: S^1 \rightarrow S^1 \times S^1$  is continuous and injective, then  $(S^1 \times S^1) \setminus f(S^1)$  has exactly two path-connected components.
2. If  $f: S^1 \rightarrow \mathbb{R}^{2022}$  is continuous and injective, then  $\mathbb{R}^{2022} \setminus f(S^1)$  is path-connected.

**Exercise 2** (Slitherlink). A *Slitherlink* puzzle consists of a square grid; some of the squares have numbers. The goal is to produce a closed loop out of the edges of the grid that is compatible with the given numbers in the following sense:

- SL 1 Neighbouring grid points are joined by vertical or horizontal edges in such a way that we obtain a closed loop.
- SL 2 The numbers indicate how many of the edges of a given square belong to the loop. For empty squares, the number of edges in the loop is not specified.
- SL 3 The loop does not have any self-intersections or branches.

Solve the following Slitherlink puzzle:

**Exercise 3** (Slitherlink and JCT). How can the Jordan curve theorem be used to establish global strategies for solving Slitherlink puzzles (see Exercise 2)? Give an example that illustrates this strategy.

**Exercise 4** (non-planarity of the torus).

1. Let  $n \in \mathbb{N}$ , let  $M$  be a compact, non-empty topological manifold of dimension  $n$ , let  $N$  be a connected topological manifold of dimension  $n$ , and let  $f: M \rightarrow N$  be continuous and injective. Show that  $f$  is surjective.
2. Conclude that there is *no* continuous injective map  $S^1 \times S^1 \rightarrow \mathbb{R}^2$ .

**Bonus problem** (the five colour theorem).

1. Choose a book on graph theory from the library that contains a proof of the five colour theorem.
2. Where does the proof use (relatives of) the Jordan curve theorem? Is this made explicit?

Submission before February 8, 8:30, via GRIPS

This is the last regular exercise sheet. Sheet 15 will consist of bonus problems.
